Understand NovoDS4k Hardware

Home Screen

Network IP address

(After being unboxed, the device is running in WiFi hotspot mode.)

Configuration Buttons

Device firmware version

(You may upgrade to the latest version for new features and improved performance.)

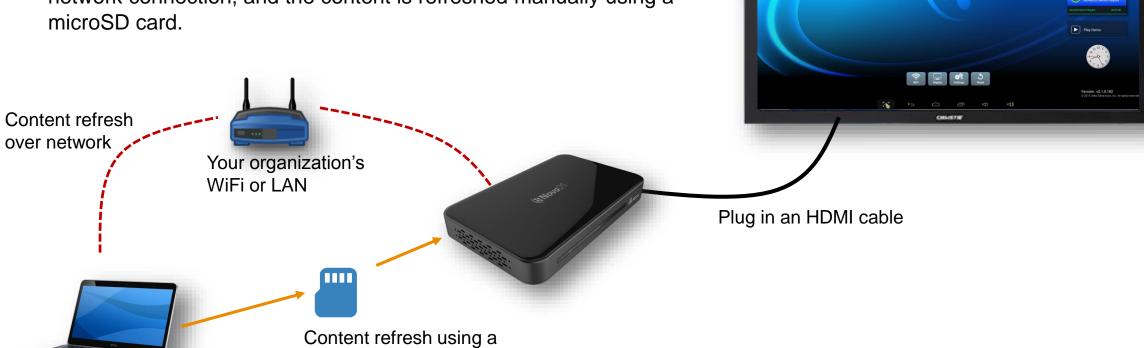

Plan Your Deployment

NovoDS/NovoDS4K can be deployed in 2 modes:

- Network mode: majority of users use this mode, where both content refresh and device management can be done over network.
- **Standard-alone mode**: the device is running by itself without any network connection, and the content is refreshed manually using a microSD card.

microSD card

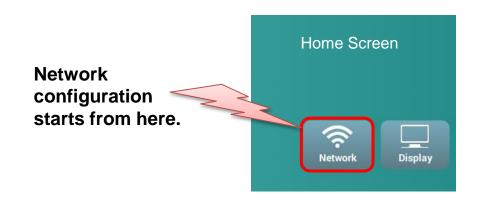

NovoDS

Connect to Your Network

If you decide to deploy NovoDS/NovoDS4k in network mode, you can connect it to your network via WiFi or Ethernet.

- Only one network connection is allowed at one time, which means that if you connect it to your wired network, its WiFi connection is automatically disabled.
- Its WiFi Hotspot mode is only for product demo and evaluation purpose, and is not recommended in actual deployment as it by default is an open network without any security.

To enable successful operations of a NovoDS/NovoDS4K device, the following ports should NOT be blocked by your network's firewall.

Port Number	Type	Description	
20110	TCP	Port for command and control	
20111	TCP	Port for file transfer (ftp command)	
20112	UDP	Port for status reporting, real-time message show/hide, screenshot start/stop	
20113	TCP	Port for upgrade	
20114	TCP	Port for screenshot	
20116	UDP	Port for device auto discovery	
20117	TCP	Port for uploading files	
20118	UDP	Port for device synchronization using broadcast	
20119	TCP	Port for synchronized playback among devices	
20120		Reserved for future use	
20121	TCP	Port for file transfer in ftp passive mode

Understand the Software

One-time hardware purchase Life-time software usage and FREE upgrade

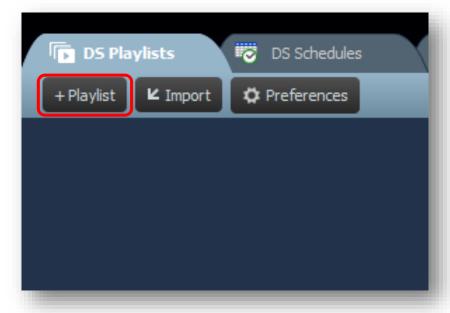

Design | Publish | Manage all-in-one solution

Software	os	Where to Download	Application
NovoDS Studio	Windows & MAC	novods.vivitekusa.com	Playlist creation, schedule and device management
NovoDS Simulator	Android	ANDROID APP ON Google play	This full-feature NovoDS simulation App is typically used to preview your playlist before publishing it to an actual NovoDS/NovoDS4K device.
NovoDS Remote	Android, iOS	ANDROID APP ON Coogle play App Store	This mobile App is designed for you to control your NovoDS/NovoDS4K devices, including changing playlists, and showing overlay messages, etc.

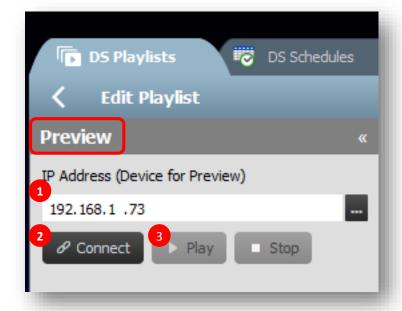

Build Your First Playlist

Create Preview

Under "DS Playlists" tab, click "+ Playlist" button to create a new playlist

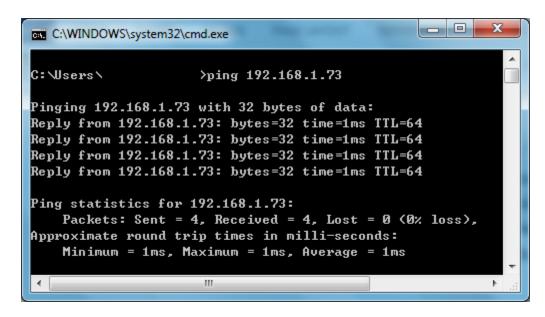

- Enter the IP address of your NovoDS/NovoDS4K device
- 2 Click to connect to your NovoDS/NovoDS4K device
- 3 Click to upload your playlist and play it

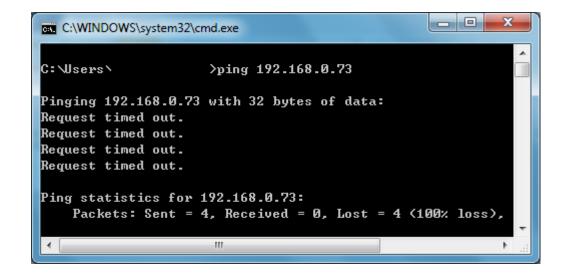

vivitek Troubleshoot Connection Issues (1)

Symptom 1: I can not connect "NovoDS Studio" software to my NovoDS/NovoDS4K device.

Suggestion: The first step is run "ping" command to test the network connection between your PC/MAC and your NovoDS/NovoDS4K device.

Ping succeeds!

Ping fails!

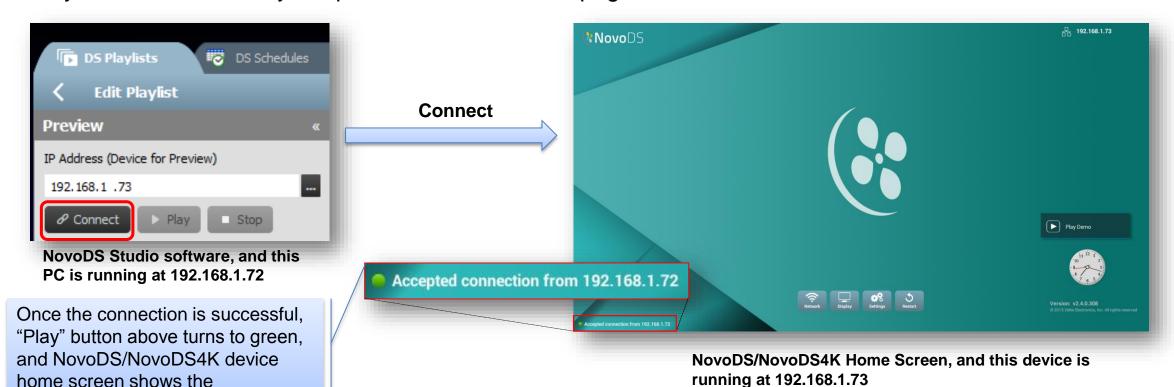

The next step is to make sure your NovoDS/NovoDS4K device and the PC/MAC are on the same network.

vivitek Troubleshoot Connection Issues (2)

"connection" message.

Symptom 2: "Ping" works, but when I click "Connect" button from NovoDS Studio software, there is no response (like nothing happens.)

Suggestion: This is likely caused by your network firewall policy, which blocks the communication between your NovoDS/NovoDS4K device and the PC/MAC running NovoDS Studio. You may ask your IT team to verify the port numbers listed on page 6 are not blocked.

vivitek Troubleshoot Connection Issues (3)

Symptom 3: My NovoDS Studio Software can connect to the device, but when I click "Play" button to upload a playlist, the playlist is not uploaded or "played" properly.

Suggestion: When you launch NovoDS Studio software the very first time, Windows sometimes prompts a "Security Alert" as shown on the right. In this case, please allow novods exe to communicate on all these networks (Domain, Private, Public). Click "Allow access" to close this window.

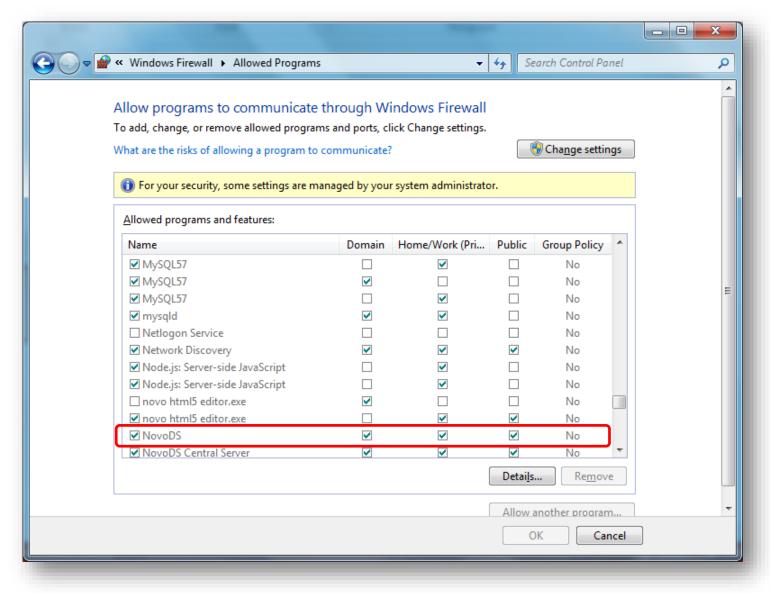

Windows Security Alert Windows Firewall has blocked some features of this program Windows Firewall has blocked some features of novods, exe on all public, private and domain networks. novods.exe Name: Publisher: Unknown C:\Program Files (x86)\NovoDS\NovoDS.exe Path: Allow novods, exe to communicate on these networks: Domain networks, such as a workplace network Private networks, such as my home or work network Public networks, such as those in airports and coffee shops (not recommended because these networks often have little or no security) What are the risks of allowing a program through a firewall? Allow access Cancel

Note: MAC OS pops up similar "Security Alert" message.

vivitek Troubleshoot Connection Issues (3)

If you don't see the alert message in the previous page or somehow miss it, it does not matter. You can go to "Control panel -> **System security -> Windows** Firewall -> Allow a program through Windows Firewall" to change this setting. Find "NovoDS" application from the list, and allow it to communicate on all these networks (Domain, Private, Public).
