

## LAN\_RJ45

### Wired LAN Terminal functionalities

Remote control and monitoring of a projector from a PC (or Laptop) via wired LAN is also possible. Compatibility with Crestron / AMX (Device Discovery) / Extron control boxes enables not only collective projector management on a network but also management from a control panel on a PC (or Laptop) browser screen.

- ★ Crestron is a registered trademark of Crestron Electronics, Inc. of the United States.
- ★ Extron is a registered trademark of Extron Electronics, Inc. of the United States.
- ★ AMX is a registered trademark of AMX LLC of the United States.
- ★ PJLink applied for trademark and logo registration in Japan, the United States of America, and other countries by JBMIA.

### Supported External Devices

This projector is supported by the specified commands of the Crestron Electronics controller and related software (ex, RoomView ®).

<http://www.crestron.com/>

This projector is supported by AMX ( Device Discovery ).

<http://www.amx.com/>

This projector is compliant to support Extron device(s) for reference.

<http://www.extron.com/>

This projector supports all commands of PJLink Class1 (Version 1.00).

<http://pjlink.jbmia.or.jp/english/>

For more detail of information about the diverse types of external devices which can be connected to the LAN/RJ45 port and remote/control the projector, as well as the related control commands supporting for each external device, kindly please get contact with the Support-Service team directly.

## LAN RJ45

1. Connect an RJ45 cable to RJ45 ports on the projector and the PC (Laptop).

2. On the PC (Laptop), select **Start** → **Control Panel** → **Network and Internet**.

3. Right-click on **Local Area Connection**, and select **Properties**.

4. In the **Properties** window, select the **Networking** tab, and select **Internet Protocol (TCP/IP)**.
5. Click **Properties**.

6. Click **Use the following IP address** and fill in the IP address and Subnet mask, then click **OK**.

7. Press the **Menu** button on the projector.
8. Select **Settings2** → **Advanced1** → **Network**
9. After getting into **Network**, input the following:
  - ▶ DHCP: Off
  - ▶ IP Address: 10.10.10.10
  - ▶ Subnet Mask: 255.255.255.0
  - ▶ Gateway: 0.0.0.0
  - ▶ DNS Server: 0.0.0.0
10. Press **↵** (Enter) / **▶** to confirm settings.  
Open a web browser  
(for example, Microsoft Internet Explorer with Adobe Flash Player 9.0 or higher).

11. In the Address bar, input the IP address: 10.10.10.10.
12. Press **↵** (Enter) / **▶**.  
The projector is setup for remote management. The LAN/RJ45 function displays as follows.

**CRESTRON** Expansion Options

<p style="text-align: center;"><b>Crestron Control</b></p> <p>IP Address <input type="text"/></p> <p>IP ID <input type="text"/></p> <p>Control Port <input type="text"/></p> <p style="text-align: center;"><input type="button" value="Control Set"/></p>	<p style="text-align: center;"><b>Projector</b></p> <p>Projector Name <input type="text" value="PJ01"/></p> <p>Location <input type="text" value="RM01"/></p> <p>Assigned To <input type="text" value="Sir"/></p> <p style="text-align: center;"><input type="button" value="Set"/></p> <p>Network Config <input type="checkbox"/> DHCP Enabled</p> <p>IP Address <input type="text" value="10.10.10.10"/></p> <p>Subnet Mask <input type="text" value="255.255.255.0"/></p> <p>Default Gateway <input type="text" value="0.0.0.0"/></p> <p>DNS Server <input type="text" value="0.0.0.0"/></p> <p style="text-align: center;"><input type="button" value="Net Set"/></p>	<p style="text-align: center;"><b>User Password</b></p> <p><input type="checkbox"/> Usr Enabled</p> <p>Password <input type="text"/></p> <p>Confirmed <input type="text"/></p> <p style="text-align: center;"><input type="button" value="Usr Set"/></p> <p style="text-align: center;"><b>Admin Password</b></p> <p><input type="checkbox"/> Adm Enabled</p> <p>Password <input type="text"/></p> <p>Confirmed <input type="text"/></p> <p style="text-align: center;"><input type="button" value="Adm Set"/></p>

### Preparing Email Alerts

1. Make sure that user can access the homepage of LAN RJ45 function by web browser (for ex-ample, Microsoft Internet Explorer v6.01/v8.0).
2. From the Homepage of LAN/RJ45, click **Alert Settings**.

3. By default, these input boxes in **Alert Settings** are blank.

4. For Sending alert mail, input the following:

The **SMTP** field is the mail server for sending out email (SMTP protocol). This is a required field.

The **To** field is the recipient's email address (for example, the projector administrator). This is a required field.

The **Cc** field sends a carbon copy of the alert to the specified email address. This is an optional field (for example, the projector administrator's assistant).

The **From** field is the sender's email address (for example, the projector administrator). This is a required field.

Select the alert conditions by checking the desired boxes.

The screenshot shows the 'Send E-Mail' configuration page. On the left, there is a sidebar with 'Projector Info', 'Alert Mail Settings', and 'Crestron'. The main content area is titled 'Send E-Mail' and contains the following fields and options:

- SMTP Server:** mail.corp.com
- Port:** 25
- User Name:** Sender.US
- Password:** [Redacted]
- From:** send@mail.corp.com
- To:** rcvr1@mail.corp.com
- CC:** rcvr2@mail.corp.com
- E-mail Alert Options:**
  - Fan lock:
  - Case Open:
  - Lamp Hours Over:
  - Weekly Report:
  - Over\_Heat:
  - Lamp Fail:
  - Filter Hours Over:

Buttons for 'Mail Server Apply', 'Mail Address Apply', 'Alert Option Apply', and 'Send Test Mail' are also visible.

**Note:** Fill in all fields as specified. User can click **Send Test Mail** to test what setting is correct. For successful sending an e-mail alert, you must select alert conditions and enter a correct e-mail address.

### RS232 by Telnet Function

Besides projector connected to RS232 interface with “Hyper-Terminal” communication by dedicated RS232 command control, there is alternative RS232 command control way, so called “RS232 by TELNET” for LAN/RJ45 interface.

#### Quick Start-Guide for “RS232 by TELNET”

Check and get the IP-Address on OSD of the projector.

Make sure that laptop/PC can access the web-page of the projector.

Make sure that “Windows Firewall” setting to be disabled in case of “TELNET” function filtering out by laptop/PC.

Start => All Programs => Accessories => Command Prompt

Input the command format like the below:

**telnet ttt.xxx.yyy.zzz 23** (“Enter” key pressed)

(**ttt.xxx.yyy.zzz**: IP-Address of the projector)

If Telnet-Connection ready, and user can have RS232 command input, then “Enter” key pressed, the RS232 command will be workable.

### How to have TELNET enabled in Windows

By default installation for Windows, “TELNET” function is not included. But end-user can have it by way of “Turn Windows features On or Off” to be enabled.

Open “Control Panel” in Windows

Open “Programs”

Select “Turn Windows features on or off” to open

Have “Telnet Client” option checked, then press “OK” button.

**Specsheet for “RS232 by TELNET” :**

1. Telnet: TCP
  2. Telnet port: 23  
(for more detail, kindly please get contact with the service agent or team)
  3. Telnet utility: Windows “TELNET.exe” (console mode)
  4. Disconnection for RS232-by-Telnet control normally: Close Windows Telnet utility directly after TELNET connection ready
  5. Limitation 1 for Telnet-Control: there is less than 50 bytes for successive network payload for Telnet-Control application.  
Limitation 2 for Telnet-Control: there is less than 26 bytes for one complete RS232 command for Telnet-Control.  
Limitation 3 for Telnet-Control: Minimum delay for next RS232 command must be more than 200 (ms).
- (\*, In Windows built-in “TELNET.exe” utility, “Enter” key pressed will have “Carriage-Return” and “New-Line” code.)

Input the command format like the below:

**telnet ttt.xxx.yyy.zzz 23** (“Enter” key pressed)

(**ttt.xxx.yyy.zzz**: IP-Address of the projector)

If Telnet-Connection ready, and user can have RS232 command input, then “Enter” key pressed, the RS232 command will be workable.

### How to have TELNET enabled in Windows

By default installation for Windows, “TELNET” function is not included. But end-user can have it by way of “Turn Windows features On or Off” to be enabled.

Open “Control Panel” in Windows

Open “Programs”

Select “Turn Windows features on or off” to open

Have “Telnet Client” option checked, then press “OK” button.

**Specsheet for “RS232 by TELNET” :**

1. Telnet: TCP
2. Telnet port: 23  
(for more detail, kindly please get contact with the service agent or team)
3. Telnet utility: Windows “TELNET.exe” (console mode)
4. Disconnection for RS232-by-Telnet control normally: Close Windows Telnet utility directly after TELNET connection ready
5. Limitation 1 for Telnet-Control: there is less than 50 bytes for successive network payload for Telnet-Control application.  
Limitation 2 for Telnet-Control: there is less than 26 bytes for one complete RS232 command for Telnet-Control.  
Limitation 3 for Telnet-Control: Minimum delay for next RS232 command must be more than 200 (ms).  
(\* , In Windows built-in “TELNET.exe” utility, “Enter” key pressed will have “Carriage-Return” and “New-Line” code.)

## Communication parameter setup

You can use the serial control command to input commands for projector control or retrieve its operational data through Windows client terminal software

Item	Parameter:
Bit per Second	9600 bps
Data Bit	8-bit
Parity	None
Stop Bit	1
Flow Control	None

### Operation commands

#### Operation command syntax

An operation command is prefixed by character "op", followed by control commands and settings separated by space blank [SP], and ended by carriage return pair "CR" and "ASCII hex 0D". Syntax of serial control commands:

**op[SP]<operation command>[SP]<Setting Value>[CR]**

- op**                                A constant indicating this is an operation command.
- [SP]**                              Indicate one blank space.
- [CR]**                              Indicate the command ending carriage return pair "CR" and "ASCII hex 0D".
- Setting value**                Settings of operation command

Types of setup strings	Characters of settings	Description
Query current setup	?	Question mark "?" indicates querying current setup
Setup	= <settings>	Syntax: Symbol "=" suffixed with setup values
Increase setup order of adjustment items	+	Some settings are changed in steps. Symbol "+" indicates changing one step up
Decrease setup order of adjustment items	-	Some settings are changed in steps. Symbol "-" indicates changing one step down
Execute operation command	None	Certain operation commands execute after input without further setting or regulators.

Examples:

Control items	Input command row	Projector return message
Execute command	reset.all[CR]	RESET.ALL
Query current brightness	op bright ?[CR]	OP BRIGHT = 50
Set up brightness	op bright = 100[CR]	OP BRIGHT = 100
Brightness value + 1	op bright +[CR]	OP BRIGHT = "new value"
Brightness value - 1	op bright -[CR]	OP BRIGHT = "new value"
Out of range or not support	op bright = 200[CR]	OP BRIGHT = NA
Illegal command	op abright = 100[CR]	*Illegal format#

**Note:**When sending the multiple commands, make sure the return message of the last command is received before sending out the next one.
